***Short description:***

For newborn or weaning puppies, Beaphar Lactol Milk Replacer for Puppies is a whole milk supplement enhanced with superior amino acids and minerals to provide a perfectly balanced diet and the best start in life.

***Long description:***

Beaphar Lactol Milk Replacer for Puppies is a complete milk replacement feed for newborn and orphaned puppies, which has saved the lives of countless young animals for over 100 years.

Beaphar Lactol Milk Replacer for Puppies has a superior amino acid content and is enriched with essential vitamins and minerals, providing a perfectly balanced complete feed. Made from easily digested whey products it closely resembles natural mother's milk. Ultra-filtration concentrates the proteins, and a slow drying process during production preserves the protein molecules, making it more nutritionally valuable. Contains DHA (Docosahexaenoic acid), which has been shown to help cognitive development and visual acuity.

Beaphar Lactol Milk Replacer for Puppies can also be used for weaning puppies, pregnant or lactating mothers and sick or convalescing animals.

***Benefits:***

- **COMPLETE MILK REPLACER MADE WITH WHOLE MILK:** For newborn, underweight and orphaned puppies. Beaphar Lactol has saved the lives of countless young animals for over 100 years.
- **HELPS BOOST COGNITIVE DEVELOPMENT & VISION:** Contains superior amino acid content and DHA (Docosahexaenoic acid), which has been shown to help cognitive development and vision.

- **CLOSELY RESEMBLES THEIR MOTHER’S NATURAL MILK:** Made from easily digested whey protein. Ultra-filtration concentrates the proteins, and a slow drying process during production preserves the protein molecules, making it more nutritionally valuable.
- **ENRICHED WITH VITAMINS AND MINERALS:** Enriched with essential vitamins and minerals, providing a perfectly balanced complete feed.
- **EASY MIXING:** No need to whisk, simply mix with a fork.
- **HOW TO FEED LACTOL:** Beaphar Lactol Feeding Set (Bottle, Teats & Brush) or Beaphar Feeding Syringes are ideal for helping you hand rear, or you can mix Beaphar Lactol into wet food during weaning.
- **SUITABLE FOR ALL PUPPIES, PREGNANT OR LACTATING DOGS:** It is also suitable for sick or convalescing dogs.

**For best results:**

Fully read the mixing instructions before you begin making Beaphar Lactol Milk Replacer for Puppies

**Ingredients:**

**Instructions:**

ALWAYS FULLY READ THE PRODUCT LABEL BEFORE USE.

Using the scoop provided, add Beaphar Lactol Milk Replacer for Puppies to warm water (allow boiled water to cool before use) and stir until completely dissolved. Allow to cool until lukewarm (38°C or blood temperature).

The use of proper feeding equipment is highly recommended, such as the Beaphar Feeding Set or Beaphar Feeding Syringes. These should always be clean and sterile. Beaphar Lactol can also be mixed with cold water for older dogs.

Prepared Beaphar Lactol can be refrigerated for 24 hours but should be reheated to 38°C or blood temperature before feeding to young animals.

**COMPLETE DIET:**

For un-weaned puppies. It is important to weigh young puppies on a daily basis so that you can compare their daily growth increase with the growth tables from your breeder or vet.

**Recommended dilution:**

Using the scoop provided, add 31g (7 level scoops) to 100ml warm water. 1 litre of prepared Beaphar Lactol Puppy Milk contains approximately 1250 kcal. Use the table below for approximate feeding guidelines. The volume per day MUST be split across the recommended number of feeds per day.

Weight	Volume per day	Age (days)	Number of feeds per day
250g (0.25kg)	100ml	2–14	6–8 (including overnight)
500g (0.5kg)	160ml	15–21	6 (including overnight)
1000g (1kg)	250ml	22–28	6 (including one overnight)
2000g (2kg)	400ml	29*–35*	4–6

5000g (5kg)	900ml	36*-42*	2-6 *
-------------	-------	---------	-------

After the 28th day, slowly change to a more solid diet, i.e. puppy food. Beaphar Lactol can be used to assist weaning. Mix prepared Beaphar Lactol with a small amount of puppy food, gradually decreasing the volume of milk and increasing the amount of solid food each day.

Complimentary feeding (in addition to their normal food):

For puppies below 8 weeks, Beaphar Lactol can be given as a complimentary feed, in addition to their mother's milk.

Recommended volume = up to 40ml per kg.

Weaned puppies over 8 weeks, adult dogs during pregnancy or lactation, sick or convalescent:

Recommended volume to feed = 11ml per kg.
