Nowadays we are experiencing a serious increase in sensitivity to nutrition and allergy problems. As a consequence of increasing environmental problems and hectic lifestyles, often connected with considerable stress situations, our feline friends react increasingly with extreme sensitivity to their nutrition and allergic symptoms. These are frequently accompanied by a protein and/or carbohydrate intolerance which leads to allergic reactions in cats. The most frequent indications of this are skin irritations, itching, vomiting, digestive problems and diarrhoea. The symptoms mentioned may occur suddenly, even in connection with types of food which your cat has been eating for a long period of time without experiencing any difficulty. With INTEGRA® Sensitive ANIMONDA® has developed various food specialities which, as a complete form of nutrition, ensure special and well-balanced feeding and, at the same time, increase the cats' sense of well-being in this difficult phase. All products contain only one source of protein and of carbohydrate, in order to reduce the "potential" in the food to an absolute minimum. In addition pure thistle oil serves to supply valuable unsaturated fatty acids - for a silky coat and healthy skin.

Declaration

Complete diet for adult cats
